NEW STANDARD PORTLIGHT LENS REPLACEMENT ON PRE-2000 PORTLIGHTS

From its introduction in 1997 to June 2000 the (New) Standard Portlight was made with hinges and handle catches fixed to the frame with a pressing / staking process.

This type hinge / handle catch attachment is not user serviceable.

In June 2000 the portlight was changed to use screwed on hinges and handle catches that are user serviceable. The hinges and handle catches sometimes have packers under them to control the seal compression.

In 2008 the hinges were changed from using M4 fastenings as hinge pins to M5 fastenings as hinge pins. These do not fit the M4 hinge and on pre-2000 units made from 1997 to 2000 hinges cannot be changed.
